Schuyler House SchuyLab LIS

OVERVIEW

SchuyLab is a full-featured Laboratory Information System that is fully scalable from a single station to a network of 50 or more stations. SchuyLab allows you to process as few as 30 specimens daily, or as many as 3000. It interfaces instruments, monitors QC, compiles worksheets and daily logs, and collates and prints patient results. Billing, Internet, Auto-verification and other advanced features are available.

FEATURES

- **Easy to use!**
- SchuyLab is 'turnkey' software that has been installed in over 800 locations.
- Totally Reliable – SchuyLab has been in use for over 15 years.
- Reasonably price
- Modular (only buy what you need)
- Fits any size from a small lab to a full hospital lab with more than one location
- Many customizable features to run the software your way
- Interfaces with all major lab equipment
- Interfaces with other systems: EMR/HIS/Practice Management Systems/Billing Systems
- Schuylab was designed and programmed to meet CLIA requirements

VERSIONS

	Basic	Slim	Lite	Pro
Maxim Number of Instruments	0	1	1 or more	1 or more
Maxim Number of Workstations	1	1	1	1 or more

Schuyler House SchuyLab Specifications

BASIC

Basic is a streamlined version of SchuyLab with no instruments or EMRs interfaced. It allows the laboratory to produce a consolidated report, store a virtually unlimited amount of patient history, track quality control, and produce usage reports. If your volume is low enough that you can manually enter your results, SchuyLab/Basic will meet your needs – or you can use it until you are ready to upgrade. The best thing about the Basic version is that it's **FREE**. We think that, after using SchuyLab/Basic, many labs will want to upgrade.
For those who remain satisfied with the capabilities of Basic, it is our gift to the industry – no one should be without a system to manage their data.

SLIM (SchuyLab/IM)

SLIM (SchuyLab/IM) acts as an instrument manager. It provides all the capabilities of Basic with the addition of a single analyzer interface. This by no means limits your testing to that instrument – the ability to enter results manually remains.

LITE (SchuyLab/Lite)

Lite (SchuyLab/Lite) can support multiple instruments as well as interface to your EMR or HIS. While there is no particular limit to the number of instruments you can interface to SchuyLab/Lite, once a laboratory goes beyond three or four, it usually becomes necessary to think of extra stations, more printers etc., which requires an upgrade to the full featured SchyLab/Pro version.
There are a number of features available on the SLIM and Lite versions which can add specialized capabilities to meet your needs.

PRO

Beyond the streamlined versions, there is the SchuyLab/Pro version which expands the customization capabilities and allows the lab to add as many stations as desired with multiple printer and provides the client support necessary for reference labs. SchuyLab/Pro is our 'big lab' product and can support systems with dozens of stations processing thousands of samples per night. You can add billing to provide integrated electronic billing and payment posting, as well as having the tools to manage a large client base.
It also supports SchuyNet which provides your customers direct web access to your data on your site, not through a third-party.
